### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Restriction Requirement***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Group I, claim(s) 1-15, 21-22, drawn to a compound
- II. Group II, claim(s) 16-18, drawn to a process for preparing the compound

2. The inventions listed as Groups I to II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The technical features that are common to Groups I to II include a compound comprising at least one of hydrolysate or condensate of epoxy- and silane-functional oligomers and polymers. This feature is taught by the prior art to Yamaya et al. (US 6,846,568). Specifically, attention is drawn to a solution of hydrolysable silyl group-bearing acrylic polymer of working example 3 that is formed from methacryloxypropyltrimethoxysilane and glycidyl methacrylate and subsequent hydrolysis and condensation of the acrylic polymer in an acidic medium (col. 23). The common technical feature of presently cited claims in Groups I to II fails to define a contribution over Yamaya et al. and thus, the common technical feature does not amount to a special technical feature. In light of above, there is lack of unity between the cited groups.

Art Unit: 1762
